

A Few Useful Sources for Recent Minimalism

1. Chomsky, Gallego and Ott (2019): a rundown of recent simplifications to Minimalism. I think it's very interesting that various things they propose are found to be necessary to make the math nice in Marcolli et al, evidently before any interaction with Marcoli.

2. <https://biolinguistica.files.wordpress.com/2010/03/chomsky-bare-phrase-structure-where-x-bar-theory-is-eliminated>
3. Page proofs of Ely van Gelderen (2022) *Third Factors in Language Variation and Change* <https://www.public.asu.edu/~gelderer/ThirdFactors2022.pdf>. Excellent summary of relatively recent Minimalism, application to topics of current interest to many people.
4. 'Working toward the strong interpretation of SMT' ... lecture series starting at <https://www.youtube.com/watch?v=vD1Vqv7cmq4&t=4697s>. Very recent. Often, too much verbiage about simplicity and not enough actual mechanisms for my taste. One of the lecture includes a rather ignorant discourse by Chomsky about Construction Grammar.
